Exhibit A

Proposed Muskogee County Hot Mix Asphalt (HMA) and Asphalt Paving Specifications

### Hot Mix Asphalt

All aggregate and bituminous materials used in Hot Mix asphalt shall be on the ODOT qualified products list and meet the specifications in **Oklahoma Department of Transportation 2019**Standard Specifications For Highway Construction manual.

Hot Mix asphalt plants shall be listed on the Oklahoma DOT Materials Division Hot Mix Asphalt (HMA) Plant List and be current in Inspection and Scale Certification status.

Asphalt Mix designs shall be designed by an ODOT approved lab as listed on the current ODOT Qualified Lab List.

Asphalt Mix designs shall conform to A, B, or C; HVEEM mix design methods and tested with a HVEEM compactor. Mixes will not exceed 30% Recycled Asphalt Pavement. Recycled Asphalt Pavement materials will be 100% passing the ½" sieve.

Mixture:	Mix - Hot Lay)  Asphalt Concrete

% Total AC	3.8-6.5	4.7-7.5	5.1-7.5	
Virgin Viscosity Grade Asphalt Cement	PG-64-22	PG-64-22	PG-64-22	

Hot Mix Asphalt Producers will supply the Commissioner with Quality Control results performed by an ODOT approved lab as listed on the current ODOT Qualified Lab List. Results will be supplied daily, every 1000 tons supplied, or as directed by the Commissioner.

Alternate ODOT approved HMA mixes of equal or greater performance specifications may be accepted on a case-by-case basis at the discretion of the Commissioner.

Placing of Bituminous Surface Course: The material shall be laid only on an approved base course or pavement which has been primed or tack coated as previously specified and is reasonably free of objectionable material and only when the surface of the base course is dry and weather conditions are suitable. Contact surfaces of curbs, structures and joints shall be painted with a thin uniform coating of materials as specified for tack coat. The mixture shall be spread in a uniform layer so that after compaction the minimum cross-section will be fulfilled. Hand spreading will be permitted where the mixture is placed on narrow strips or small irregular areas.

Compaction: Rolling equipment shall be in good operating condition and of an approved type which will produce a pavement of the required density. Rolling or compaction shall continue until the compressed mixture has a density of not less than 92 percent of the laboratory compacted density for the mixture. Final compaction shall be made with steel wheel rollers. The operation of the rollers shall be such as to avoid displacement of the mixture. Adhesion of the mixture to the roller wheels will not be permitted. Necessary precautions shall be taken to prevent the dripping of gasoline, oil, grease or other foreign matter on the pavement, either when the rollers are in operation or when standing.
