Identify the need or risk

Water rescue craft: for Emergency Management

How does the proposed expenditure respond to the need or risk?

Water rescue craft:

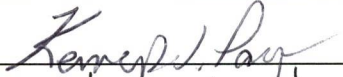

During COVID-19 pandemic we also had natural disasters that required rescuing residents, motorists and travelers from water incidents. Most rescues of that kind require close contact between rescuers and victims. To limit the number of responders who come into contact with those victims we have researched water rescue crafts with a layout that allows the operator and the boatman to be seated in a way that the rescuer and victim can be placed in the middle with adequate distancing to lesson exposure to illnesses. Also the craft is made of a hard plastic and metal components which are easily disinfected between rescues.
